Oil spill trajectory simulations are generated by BOEM to be used to estimate spill risk. The BOEM uses a numerical computer model that simulates the likely trajectory of a surface slick, represented as a point launched from locations projected onto a gridded area.

Oil Spill Risk Analysis Model (OSRAM) | Bureau of Ocean ...

The bureau's Oil-Spill Risk Analysis (OSRA) model combines the probability of spill occurrence with a statistical description of hypothetical oil-spill movement on the ocean surface. Modeling results are used by staff for preparation of environmental documents in accordance with the National Environmental Policy Act; other Federal and State agencies for review of environmental impact statements (EISs), environmental assessments, and endangered species consultations; and oil industry ...

Hardcover$200.95. O-Book. Description. This book is designed to help scientifically astute non-specialists understand basic geophysical and computational fluid dynamics concepts relating to oil spill simulations, and related modeling issues and challenges. A valuable asset to the engineer or manager working off-shore in the oil and gas industry, the authors, a team of renowned geologists and engineers, offer practical applications to mitigate any offshore spill risks, using research never ...

The oil spill simulation by a large number of passive (not interacting with the existing hydrodynamics) particles, transported in a Lagrangian frame of reference, is the most effective procedure, used in most contemporary models as: (a) it can describe oil spill geometries and shapes at subgrid level, (b) the model results are not distorted by numerical errors, like numerical diffusion, and (c) the fraction of the initially introduced particles (at the spill source) reaching the coast can be ...

Modeling oil spill risk in Washington waters. This model is part of a package of measures passed by the Legislature in 2019 to reduce the risk of oil spills and protect Southern Resident Killer Whales. The model will be a long-term asset for Ecology to analyze oil spill risks and the potential effectiveness of oil spill prevention, preparedness, and response strategies.

Oil spill models and modeling tools for Pollution Preparedness and Response (PPR) can support effective risk management. However, there is a lack of integrated approaches that consider oil spill risks comprehensively, learn from all information sources, and treat the system uncertainties in an explicit manner.

SPILLCALC Oil and Contaminant Spill Model. With a growing number of pipeline and marine terminal development projects in Canada, regulatory requirements for the ecological and human health risk assessments and emergency spill response plans have become very strict and technical. For more than 10 years, Tetra Tech has provided expertise in 3D numerical modeling of Canadian waters and the behavior of oil on water during a hypothetical spill for large pipeline companies such as Enbridge, Kinder ...
