Patients and carers also need to be informed of any medication changes and the rationale behind them in order to promote medication adherence and correct medication use. It is particularly important that elderly patients are regularly reviewed for any difficulties or concerns regarding medication management (e.g. adverse effects, adherence issues, difficulty with the route of administration).

Prescribing medicines for elderly patients - Medicine
Repeat dispensing is a type of repeat prescribing which allows community pharmacists to dispense regular medications to suitable patients without the direct involvement of the GP surgery on each occasion the prescription is needed. This is done according to an agreed protocol for patients with stable conditions for periods of time up to one year.
