When replacing a module, this function ensures the correct software/ calibration and configuration data are loaded onto the new module. This is required regardless of whether or not the original module is available. Software/ calibration files are what determine how a module processes data and commands outputs.

The anti-lock breaking system (ABS) on a Ford F150 pulses the brakes for you in the event of hard braking. Rather than manually pumping the brakes, the ABS system pulses the brakes many times faster than any human being could ever do. This prevents the wheels from locking up and keeps the F150 from skidding across the pavement.
