Vanderbilt's Standalone Access Control. Vanderbilt's single door access control products are robust, reliable, and cost-efficient. They eliminate the challenge of managing keys and the cost of replacing locks when a key gets lost. They're compact and easy-to-use, with a modern design that is suitable for either indoor or outdoor mounting. Our standalone product portfolio is comprised of top class door entry phones, codelocks, and wireless locks.

Standalone | Vanderbilt Industries

The simplest single-door access control system uses a mechanical or electric lock with a keypad. For example, Schlage provides single locks with keypads. This type of system is good for home use and is not recommended when many people will be using the door.

Types of Standalone Door Access Control Systems. These include: Stand-Alone Locks . These draw power from the battery, and offer "all-in-one" control of access for a single door. These locks have replaceable internal batteries that can be unlocked with the aid of a proximity card keypad or both used in a combination.

What is Standalone Door Access Control System?

Standalone access control is usually one or two small units wired directly onto a door panel to control access to the door. There is no need for a PC network and you don't have to secure every single door within your building, only those you wish to. User tokens can be added to the system in seconds by presenting an enrolment card to the door.

Offline Access Control | Paxton Access Control

The unit is single door multi-function standalone access controller or a Wiegand output keypad or card reader. This unit supports up to 2000 users in either a Card, 4 digit PIN, or a Card + PIN option. The unit has many extra features including lock output current short circuit protection, Wiegand output , and a backlit keypad.

Single Door Standalone Access Control User Manual

Standalone access control is usually one or two small units wired directly onto a door panel to control access to the door. There is no need for a PC network and you don't have to secure every single door within your building, only those you wish to. User tokens can be added to the system in seconds by presenting an enrolment card to the door.
