The course focuses on advanced SI and CI engine systems (though there will be some discussion of natural gas engines), as well as the principal aspects of IC engine modeling (thermodynamics and fluid mechanics of air path systems, in-cylinder processes, combustion and emissions, heat transfer, torque production and crankshaft dynamics), as well ...

Advanced Ic Engines - builder2.hpd-collaborative.org

Analytical expressions for the upper bounds of power and efficiency of an internal combustion engine are obtained taking into account finite rate of heat exchange with the environment and nonzero entropy production due to chemical reactions. Recommendations of theoretically possible ways of improving internal combustion engines are presented.
