Modeling is a resource intended for advanced graduate students, faculty and/or researchers interested in multilevel data analysis, especially in education, social and behavioral sciences. The chapters are written by prominent methodological researchers across diverse research domains such as educational statistics,

Where To Download Advances In Multilevel

The hierarchical linear model is a type of regression analysis for multilevel data where the dependent variable is at the lowest level. Explanatory variables can be dened at any level (including aggregates of level-one variables).

MULTILEVEL ANALYSIS

Page 24/37

Where To Download Advances In Multilevel

Multilevel modelling extends more traditional statistical techniques by explicitly modelling social context. This introduces a degree of realism often absent from single-level models such as multiple regression. Many of the populations of interest to social scientists have a hierarchical, or nested structure.
