(SPC) Statistical Process Control is the use of statistical techniques such as control charts to analyze a process or its output so as to take appropriate actions to achieve and maintain a state of statistical control and to improve the process capability. There are two phases in statistical process control studies.

They include Advanced Product Quality Planning & Control Plan (APQP), Production Part Approval Process (PPAP), Failure Mode and Effects Analysis (FMEA), Measurement System Analysis (MSA), and Statistical Process Control (SPC). Statistical Process Control (SPC) is a method that uses control charts as a principal tool in the process of continual improvement. Control charts provide a scientific basis as to the presence or absence of special causes of variation.

AIAG Core Tools. Statistical Process Control (SPC) is a method of measuring and controlling quality by monitoring the manufacturing process. Quality data is collected in the form of product, process measurement, and readings and is used to evaluate, monitor, and control a process. In 1930, the concept of Statistical Control was introduced as a means of quality assurance using control charts and accepting that product as well as process provided data that needed analysis to start focusing on ...

Key Term Tuesday: SPC. by AIAG | Apr 05, 2016. We've all heard of the basic statistical terms: mean, median, and mode, but when it comes to Statistical Process Control things get a bit more complicated. This "Key Term Tuesday" we're focusing on SPC. Statistical Process Control or SPC is a collection of tools that analyze processes and takes the appropriate actions to achieve and maintain statistical control while improving process capability.
