Alzheimer's Unmasked: Barton, Paul A.: Amazon.com.au: Books

In contrast, the symptoms of dementia come on slowly, over months or even years. So if changes or symptoms start suddenly, this suggests that the person has delirium. Dementia with Lewy bodies is an exception. This type of dementia has many of the same symptoms as delirium (including visual hallucinations) and they can vary a lot over the day.

Delirium | Alzheimer's Society

Alzheimer's is the most common type of young-onset dementia and may affect around 1 in 3 younger people with dementia. However, up to 2 in 3 older people with dementia have Alzheimer's disease. Alzheimer's disease develops when proteins build up in the brain to form structures called 'plaques' and 'tangles'.

What causes young-onset dementia? | Alzheimer's Society

As the condition develops, memory problems become more severe and further symptoms can develop, such as: confusion, disorientation and getting lost in familiar places difficulty planning or making decisions problems with speech and language problems moving around without assistance or performing ...
