Abstract By performing this experiment, students in general and introductory physical chemistry can learn more about the effect of a catalyst on a chemical reaction. This experiment, which is a modified version of the traditional iodine clock reaction, allows students to calculate rates of reaction, orders of reactants, and activation energies.

### An Experiment to Demonstrate How a Catalyst Affects the ...

Catalyst: A catalyst is a substance that speeds up a reaction but undergoes no permanent chemical change itself. Catalysts increase the rate of a reaction by providing an alternative route to the reaction- one that requires less energetic collisions between reactant particles. If less
