shape of your elements, and then instruct the ANSYS program to generate all the nodes and elements automatically. By contrast, with the direct generation method, you determine the location of every node and the size, shape, and connectivity of every element prior to defining these entities in your ANSYS model.

ANSYS Meshing is automatically integrated with each solver within the ANSYS Workbench environment. For a quick analysis or for the new and infrequent user, a usable mesh can be created with one click of the mouse. ANSYS Meshing chooses the most appropriate options based on the analysis type and the geometry of the model.

Description This Ansys Meshing course is aimed to those who want to learn how to create high quality mesh. Each chapter has specific workshop model, showing how to use the tools (step by step), for doing more practice. Following topics will be covered in this course;

ANSYS Meshing = Learn how to use Ansys Meshing effectively ...

Meshing is an integral part of the computer-aided engineering simulation process. The mesh influences the accuracy, convergence and speed of the solution. Furthermore, the time it takes to create and mesh a model is often a significant portion of the time it takes to get results from a CAE solution.
