Welcome to this course on Hands-on Embedded Systems with Atmel SAM4s ARM Processor. At the end of this course you will be comfortable with the ARM processor core, processor model, exception model, reset sequence, general and special registers, and also a master in the ADC peripheral. This course has been made from the ground-up to help you transition from the world of Arduino into the world of 32 bit Atmel SAM4s ARM microcontrollers.

ates the embedded C paradigm from the conventional ANSI C. Again the authors explain how to successfully overcome the memory and time constraints while developing an embedded C program. Chapter 4 gives an overview of program development for on-chip resources for MCS51 family of microcontrollers. Chapters 5–8 are devoted to live case studies.
