~~BIO 5 GENERAL BIOLOGY~~

USC scientists have found evidence that the Earth's inner core oscillates, contradicting previously accepted models that suggested it consistently rotates at a faster rate than the planet's surface.

~~The Earth moves far under our feet: A new study shows that the inner core oscillates~~

In new research, seismologists see Earth's core oscillating, not just spinning uniformly. Their data is drawn from records of underground nuclear explosions in the 20th century. This paper ...
