Basic Life Support (BLS) Basic Life Support (BLS) is the foundation for saving lives. It is designed for healthcare providers and trained first responders who provide care to patients in a wide variety of settings or by those in a healthcare training program. Basic Life Support teaches single-rescuer and team basic life support skills for application in both pre-hospital and in-facility environments, with a focus on high-quality CPR and team dynamics.

Basic Life Support (BLS)

For infants, a manual defibrillator is preferred; however, if a manual defibrillator is not available, an AED designed for use on children and infants is the next best thing. When nothing else is available, and adult AED may be used- after all, the alternative is death, and studies have not shown that infants and children resuscitated with an adult AED suffer any permanent damage to the heart.

BLS Study Guide - National CPR Association

The Basic Life Support (BLS) for Healthcare Providers Classroom Course is designed to provide a wide variety of healthcare professionals the ability to recognize several life-threatening emergencies, provide CPR, use an AED, and relieve choking in a safe, timely and effective manner. Who should take this class?
