Bronchial Asthma and Management | nurseinfo

Asthma has a substantial impact on the quality of life of the 5.4 million people in the UK receiving treatment for asthma and on their families. 1 Persistent symptoms cause significant morbidity and absence from work and school, and poor control results in increased hospital admissions. 2 Mortality rates associated with asthma have declined since the 1960s, but 1,131 deaths were reported in 2009.

The assessment, diagnosis and management of asthma

Implement and monitor using nursing care for clients with chronic health problems. PART A. Asthma is a chronic disease of the airways. Asthma causes the muscles in the airways to tighten and the lining of the airway becomes swollen and inflamed, producing sticky mucous. These changes cause the airways to become narrow, making it difficult to breathe.
