business organization. In computer software development, the business rules approach is a development methodology where rules are in a form that is used by, but does not have to be embedded in, business process management systems. The business rules approach formalizes an enterprise's critical business rules in a language that managers and technologists understand. Business rules create an unambiguous statement of what a business

Aligning Business Rule One way  
Goals that business rules contribute to a clearer picture of any given business process is through a kind of binary concept.

~~What is a Business Rule?~~

~~Definition from Techopedia~~

A business rule is statement that imposes some form of constraint on a specific aspect of the database, such as the elements within a field specification for a particular field or the characteristics of a given relationship. You base a business rule on the way the organization perceives and uses its data, which you determine from the manner in which the organization functions or conducts its business.

~~What Are Business Rules? ::~~

~~Chapter 11. Business Rules ...~~

A business rule defines or constrains some aspect of business and always resolves to either true or false. It specifically involves terms, facts and rules. Business rules are intended to assert business structure or to control or influence the behavior of the business. Business rules describe the operations, definitions and constraints that apply to an organization. Business rules can apply to people, processes, corporate behavior and computing systems in an organization, and are put in place to
