Clinical guidelines and recent systematic reviews establish that cognitive behavioural therapy has a potentially important role in improving the mental health of children and adolescents.

Cognitive behavioural therapy for children and adolescents

Cognitive behavioral therapy has long been shown to be particularly effective for use in treating adolescents and teens. This may be due in part to the fact that the emotions that rule most teens' decision-making processes and reactions have not been long in use, thus they are easier to mold and shape more positively in the therapeutic setting.
