Color appearance model

Color appearance models are useful to predict colors that are presented on a precisely defined background with known illumination. It is tempting to apply such models to images and video, especially to adjust such content for display in various viewing environments. Each pixel would then be treated as an independent patch of color.

Color Appearance Model - sciencedirect.com

The 3 rd Edition of Color Appearance Models contains numerous new and expanded sections providing an updated review of color appearance and includes many of the most widely used models to date, ensuring its continued success as the comprehensive resource on color appearance models. Key features:

Color Appearance Models - Scientific research articles ...

Color Appearance Model: • Any model that includes predictors of at least the relative color-appearance attributes of lightness, chroma, and hue • It must include at least some form of a chromatic-adaptation transform 23
