by the actions of different stakeholders who use them in a variety of ways. In order to understand this complex relationship between humans and nature, it is vital to understand the complexity of the interacting agents. The authors in this book attempt to do this by applying multi-agent systems to the problems of ecosystem management. The multi-agent ...

Ecosystem management is a process that aims to conserve major ecological services and restore natural resources while meeting the socioeconomic, political, and cultural needs of current and future generations. The principal objective of ecosystem management is the efficient maintenance and socially appropriate use of natural resources. It is a multifaceted and holistic approach which requires a significant change in how the natural and human environments are identified. Several different approach
