Networking today is much more (and far more interesting) than standards specifying message formats and protocol behaviors. Professors Kurose and Ross focus on describing emerging principles in a lively and engaging manner and then illustrate these principles with examples drawn from Internet architecture.

Motivates readers with a top-down,
layered approach to computer
networking. Unique among computer
networking texts, the Seventh Edition
of the popular Computer Networking:
A Top Down Approach builds on the
author 's long tradition of teaching
this complex subject through a
layered approach in a "top-down

If so, it pre-allocates channel
resources (e.g., time slots) on its radio
access network and other resources
for that device. This pre-allocation of
resources frees the mobile device
from having to go through the timeconsuming base-station association
protocol discussed earlier, allowing
handover to be executed as fast as
possible.

### COMPUTER NETWORKING BY KUROSE PDF

He is co-author (with James F. Kurose) of the popular textbook, Computer Networking: A Top-Down Approach Featuring the Internet, published by Pearson (first edition in 2000, seventh edition 2016). It is the most popular

textbook on computer networking, both nationally and internationally, and has been translated into fourteen languages.

Browser Caching. Consider an HTTP server and client as shown in the figure below. Suppose that the RTT delay between the client and server is 30 msecs; the time a server needs to transmit an object into its outgoing link is 0.5 msecs; and any other HTTP message not containing an object has a negligible (zero) transmission time.

Computing TCP's RTT and timeout values. Suppose that TCP's current estimated values for the round trip time (estimatedRTT) and deviation in the RTT (DevRTT) are 370 msec and 41 msec, respectively (see Section 3.5.3 for a discussion of these variables). Suppose that the next

three measured values of the RTT are 400 msec, 260 msec, and 370 msec respectively.
