THEORY: A thin convex lens can be characterized by its focal length f , the object distance, d_o and the image distance, d_i . These two variables are related to the focal length, f , by the lens equation: $1/f = 1/d_o + 1/d_i$ (1) All the distances are

4. Calculate the focal length of the convex lens by using the formula given. $\frac{1}{f} = \frac{1}{d_o} + \frac{1}{d_i}$, where $d_o =$ object distance, $d_i =$ image distance, $f =$ focal length. Finally, determine the mean focal length. Data and data analysis: Method
