Cutaneous Flaps in Head and Neck Reconstruction eBook by ...

A skin flap is a slightly thicker layer of skin, which is taken from an area very close to the wound where the cancer has been removed. The flap is cut away, but left partly connected so it still has a blood supply. It is moved over the wound and stitched in place. If you have a skin flap, you may need to stay in hospital for a few days.

Reconstruction: From ...

**Method:** There were seven LT cutaneous, seven LT myocutaneous, and two LT conjoint myocutaneous flaps for reconstruction of head and neck mucosal or cutaneous defects.

**Results:** The largest flap size was 22 cm × 13 cm. All donor sites were closed primarily. The highest point of reconstruction was in the nasopharynx internally and zygoma externally. All flaps survived without major complication.
