CXA1019 FM RADIO. CXA1019 is a one-chip FM/AM radio IC designed for radio-cassette tape recorders and headphone tape recorders, and CXA1019S has the following functions. CXA1019 Features. Small number of peripheral components. Low current consumption (Vcc=3V) For FM: I0=5.3 mA (Typ.) Large output of AF amplifier.

FM Radio Circuit Design: The FM Radio circuit mainly consists of LM386 IC. This is a low voltage audio power amplifier. It has 8 pins. It operates at a supply voltage of 4-12 volts. It has an op-amp internally, which acts as an amplifier. The non-inverting pin is connected to the variable resistor of 10KOhms.

The antenna in the proposed single transistor FM radio receiver circuit is not crucial and in fact should be kept as small as possible, a 10cm wire would be just enough. Remember, the circuit also acts a like an effective transmitter circuit, therefore keeping the antenna size bigger would mean transmitting noise across the ether and disturbing ...

How to Make FM Radio Circuit. In this article, you will learn how to make an FM radio circuit easily at home. This FM radio circuit is highly efficient with a clear audio output. You can adjust the frequency to any required frequency of FM station. This circuit is capable of producing the loud sound which is better than commercial radios.
