The book is organized around a series of questions and answers framed to educate professional and recreational riders as well as the scientifically curious.

Cycling Science:How rider and machine work together eBook ...

And because that part of the equation factors in the rider's weight — as discussed above — the lower the weight, the lower the required power to climb at a certain speed. Different weight, same power-to-weight ratio. So we know that if a 70kg rider and an 80kg rider are producing the same amount of power the lighter rider will climb faster.

Science of climbing: why power-to-weight ratios matter ...

: Cycling Science - How Rider and Machine Work Together. Cycling can represent sporting drama, environmental awareness, practical mobility, escape into nature, an aid to fitness, a political commitment, or even a desire for ostentatious display.
