Data Flow Diagram - Everything You Need to Know About DFD

A data flow diagram (DFD) represents graphically a flow of data within a system. It illustrates how data is input and output from the system. It also shows destinations, storage, and sources of the information in the system. In other words, DFD represents the information flow as well as where data comes from, where data goes and how it is stored.

Data Flow Diagram For Construction Management System

A data-flow diagram is a way of representing a flow of data through a process or a system. The DFD also provides information about the outputs and inputs of each entity and the process itself. A data-flow diagram has no control flow, there are no decision rules and no loops. Specific operations based on the data can be represented by a flowchart. There are several notations for displaying data-flow diagrams. The notation presented above was described in 1979 by Tom DeMarco as part of Structured
