the module is left to the user's external control circuit, that makes the application of HC-05 is very flexible. During the process of communication, the module can enter to AT mode by setting PIN34 to be high level. By releasing PIN34, the module can go back to communication mode in which user can inquire some information dynamically.

A datasheet, data-sheet, or spec sheet is a document that summarizes the performance and other characteristics of a product, machine, component, material, subsystem, or software in sufficient detail that allows a buyer to understand what the product is and a design engineer to understand the role of the component in the overall system. Typically, a datasheet is created by the manufacturer and begins with an introductory page describing the rest of the document, followed by listings of specific c

One of the handy features of a datasheet is that users can move, resize, hide, and even freeze columns on the left side of the datasheet; they can configure the datasheet exactly the way they want and when they close the application, their settings are saved and restored the next time they open the application (at least sometimes they are). Unfortunately, the next time you distribute a new version of the application, their custom settings will be gone; they will have to go through the entire ...
