On this website students will find: Chapter questions Drug calculations Useful weblinks Flash cards Just click on the links to the left.

Passing Calculations Tests in Nursing | Online Resources

Using the WIG equation: $30 \times 50 / 250 = 6$ ml. Therefore the calculation shows that, to give 30mg per hour, the infusion pump rate would need to be set at 6ml per hour. This calculation is straightforward when the rate you want (30mg/hour) and the amount of the drug in the bag (250mg) are both in the same units (mg).

Drug Calculations for Nurses Made Easy | Nursing Times

This how-to guide on drug dosage calculations has been created for student nurses, pharmacy students, pre-registration pharmacists and pharmacy technicians. The aim of this guide is to learn how to calculate a drug dosage from the stock strength. This learning is divided into three parts.

Drug Calculations for Nurses: A step-by-step approach ...

Follow these four steps to easily calculate your patient's accurate drug dosage. Find out what's in your I.V. bottle (drug concentration or number of mL of fluid). Determine in which units your drug is measured (units/hour, mg/hour, or mcg/kg/minute). Know the patient's weight in kg if your calculation is weight based.

The nurse's quick guide to I.V. drug calculations ...

Dosage and Calculations Practice Tests are some of the most commonly-searched practice exams for both student nurses and nurses wanting to take licensure and certification exams. This is because when such items are asked in examinations, an examinee is expected to calculate and compute drug dosages for their patients. It is expected that these computations are accurate.
