Systems models have long been used in biology. Biologic computer simulations require careful consideration as to the level of detail necessary for a representative model, because unnecessary detail will lead to models so complex that detailed numerical study would become highly

In mathematics, a dynamical system is a system in which a function describes the time dependence of a point in a geometrical space. Examples include the mathematical

Get Free Dynamic

Systems describe the swinging of a clock pendulum, the flow of water in a pipe, and the number of fish each springtime in a lake. At any given time, a dynamical system has a state given by a tuple of real numbers (a vector) that can be represented by a point in an appropriate state space (a geometrical
