Evolutionary embryology is the expansion of comparative embryology by the ideas of Charles Darwin. Similarly to Karl Ernst von Baer 's principles that explained why many species often appear similar to one another in early developmental stages, Darwin argued that the relationship between groups can be determined based upon common embryonic and larval structures.

Some historians think that Fabrici should be considered the founder of modern embryology because of the importance of his embryological texts: On the Formed Fetus and On the Development of the Egg and the Chick. Harvey's On the Generation of Animals was not published until 1651, but it was the result of many years of research. Although Harvey began these investigations in order to provide experimental proof for Aristotle's theory of epigenesis, his observations proved that many aspects of ...

published in 1934 titled A History of Embryology. This monograph represents one of the first general accounts of the history of embryology and presents embryology as a history of intertwined ideas, a style of historical writing advanced by noted biology historian Jane Oppenheimer.

A History of Embryology (1959), by Joseph Needham

Embryology is a branch of science that is related to the formation, growth, and development of embryo. It deals with the prenatal stage of development beginning from formation of gametes, fertilization, formation of zygote, development of embryo and fetus to the birth of a new individual. Two basic processes involved are growth and differentiation.

An embryo of 9.4 mm. (H.E.C. No. 1005, corresponding to embryo 41, fig. XVII of Keibel-Elze, with an age estimated at 30-38 days) shows the cranial portion of the gland still to be in contact with the mesothelium, while in another embryo of 9.4 mm. (H.E.C. No. 529) a thin layer of mesenchymal cells definitely intervenes between the glandular epithelium and the mesothelium, so that separation ...

This video by Beerend Hierck PhD connects the peritoneum to its early embryonic origin: the lateral plate mesoderm. It shows, how in reality, the peritoneal cavity forms around the gut tube, instead of the mostly used and easy to understand, but in fact incorrect, metaphor of the gut being pushed into the 'peritoneum balloon'.
