In this sense, electrical engineering is the branch dealing with "heavy current"—that is, electric light and power systems and apparatuses—whereas electronics engineering deals with such "light current" applications as telephone and radio communication, computers, radar, and automatic control systems.

Radio-frequency engineering is a subset of electronic engineering involving the application of transmission line, waveguide, antenna and electromagnetic field principles to the design and application of devices that produce or utilize signals within the radio band, the frequency range of about 20 kHz up to 300 GHz. It is incorporated into almost everything that transmits or receives a radio wave, which includes, but is not limited to, mobile phones, radios, Wi-Fi, and two-way radios. RF engineer

~~Radio frequency engineering — Wikipedia~~
Electrical engineering is an engineering discipline concerned with the study, design and application of equipment, devices and systems which use electricity, electronics, and electromagnetism.It emerged as an identifiable occupation in the latter half of the 19th century after commercialization of the electric telegraph, the telephone, and electrical power generation, distribution and use.

The Institution of Electrical Engineers (IEE) was a British professional organisation of electronics, electrical, manufacturing, and Information Technology professionals, especially electrical engineers.It began in 1871 as the Society of Telegraph Engineers.In 2006, it ceased to exist independently, becoming part of the Institution of Engineering and Technology (IET).

Analogue electronic engineering can provide a stimulating environment in which to work and a good career. Radio frequency engineering: Radio frequency electronic engineering has grown in its size in recent years. With many more systems using wireless links, everything from mobile phones to Wi-Fi, IoT, short range links and very much more, wireless technology is needed.

It's also one of the most exciting! We should know - we've been educating professional engineers for over 100 years. Gaining a degree in electrical and electronic engineering opens up a broad range of career opportunities. Electrical and electronics engineers can find themselves working in all kinds of environments and sectors.

Most electrical and engineering courses will last three years, and result in a BSc or BEng. If your university offers you a placement year in industry, your degree may last four years, as it may if you decide to pursue a MSc or MEng. Studying an electrical or electronic engineering degree will likely involve: writing reports and essays

The unique features of this course are that the traditional electrical and electronic engineering subjects are supported by the more current topics of Robotics, DSP and Real Time Systems and Advanced Instrumentation, Interfacing and Design, all of which explore state-of-the-art software programmable technology which is at the forefront of modern electrical and electronic systems in industry today. This course also offers an integrated systems approach to engineering, incorporating modules in ...

The Department of Electronic and Electrical Engineering (EEE) was established in 1885 as the first department of electrical technology in England. It was founded by Professor Sir Ambrose Fleming, inventor of the thermionic valve and hence the founder of the discipline of electronics.That same pioneering tradition of innovation and excellence continues to underpin our work.

Electrical engineers oversee the design, testing, manufacture, construction, and monitoring of electrical and electronic devices, machinery, and systems. One of the earliest electronic inventions was the vacuum tube, a discovery that would revolutionize the modern world and give way to photography, radio, television, and long-distance telephony.
