Soil Vapor Extraction and Bioventing - Engineering and Design (EM 1110-1-4001) This 2002 manual provides practical guidance for the design and operation of soil vapor extraction (SVE) and bioventing (BV) systems. It is intended for use by engineers, geologists, hydrogeologists, soil scientists, chemists, project managers, and others who possess a technical education and some design experience but only the broadest familiarity with SVE or BV systems.

Engineering And Design Soil Vapor Extraction And ...

The design of soil vapor extraction (SVE) systems is largely empirical due to the great number of parameters and mechanisms involved. Accordingly, the commissioning of each SVE system should be preceded by an involved screening process, which transitions into a pilot-scale test at the site of interest.

Design consideration for SVE. Soil vacuum causes water table to rise, reducing thickness of unsaturated zone. If water table is shallow, water vapor entrained into SVE system can be a problem, especially due to system freezing in winter. Surface cap is needed to reduce entrainment of clean air from the atmosphere.

Pinnacle's senior engineering staff has been addressing soil vapor intrusion issues for clients for over 15 years under a variety of regulatory environments, including several U.S. states and European countries. Pinnacle can evaluate soil vapor results and provide a risk management strategy in line with the client's best interests.
