Chapter 7, "Food security and food production systems," details the current effects of climate change, the expected decline in crop production by 2030 as a result of climate change, and what farmers can do to mitigate some of the negative impacts. As stated by the chapter authors: "The questions for this chapter are how far climate and its change affect current food production systems and food security and the extent to which they will do so in the future."

Page Green CAP project Two of the main challenges underlying the current CAP reform are 'greening' the agriculture sector (reducing environmental impacts) and viable food production with a view to ensure food security. To address these challenges, the European Environment Agency invited a panel of external experts to reflect on these challenges and to explore long-term intervention strategies in the context of the EEA's 'Green CAP project'.
