Female Ejaculation & the G-Spot: Amazon.co.uk: Deborah ...

Female ejaculation is characterized as an expulsion of fluid from or near the vagina during or before an orgasm. It is also known colloquially as squirting or gushing, although these are considered to be different phenomena in some research publications.

Female ejaculation - Wikipedia

It was Gräfenberg's contention that female ejaculation was secretion from intraurethral glands located underneath the G-spot. It was not, Gräfenberg was adamant, urine, which was the leading...

The science behind female ejaculation | The Independent ...

The G-spot, Female Ejaculation, and Squirting. The G-spot plays a vital role in female ejaculation and squirting. Female ejaculation is when a girl or a woman ejaculate a thick, scanty, whitish, and milky fluid during sex or fingering. And Squirting is when the girl or woman gushes forth a clear fluid right before or during an orgasm. Both scenarios occur when the G-spot is persistently stroked.

The Female G-Spot: The Erogenous Zone That Triggers ...

Often, female ejaculation is linked to manual stimulation of the g-spot, which can be accessed in the vagina, though it exists outside of it. The g-spot is actually the paraurethral glands, so in massaging or touching of these, which are under the vagina, it might stimulate a response of sudden production and expulsion of paraurethral fluid.

What is Female Ejaculation? (with pictures)

Female ejaculation is when a female's urethra expels fluid during sex. It can happen when a female becomes sexually aroused, but there is not necessarily an association with having an orgasm...

Squirting, also known as female ejaculation (although you don't have to identify as female to enjoy it) ... The G-spot, which is more of an area or a plane, is a large key to this process - though ...

How to squirt: female ejaculation tips

Gynaecological studies have shown that most female ejaculation occurs during sexual stimulation of the 'G-spot'. As the G-spot is stimulated, it swells and begins a fluid discharge through the...

The truth about female ejaculation | Health24

Okay everyone, it's time to talk about female ejaculation - because it's not as mysterious as many would like to believe. Scientists have found evidence that women who 'squirt' are expelling one of two different types of liquid - one pure urine, and the other a combination of urine and fluid from the female prostate gland.

Here's Where Female Ejaculation Comes From, And What It's ...

Many women who do ejaculate say that what gets them there is stimulating the G-spot: an area about 5-8cm inside the vagina. It's on the front wall (so towards your belly button, not your back) and...
