INTRODUCTION TO THE FEMALE REPRODUCTIVE SYSTEM. The female tract begins with the paired ovaries, leads through the windings of the fallopian tubes (oviducts) to the uterus, and then opens through the cervix into the vagina. Special structures, the placenta and the umbilical cord, develop during pregnancy.

the reproductive system The reproductive system is regulated by hormones that influence the male and female reproductive organs and their interactions. The female gonads are the ovaries , a pair of small glands in the pelvic region where eggs, or ova , are developed.

ATI TEAS GUIDE TO SCIENCE | THE REPRODUCTIVE SYSTEM

The prostate function is to produce fluid secreted into the urethra during ejaculation. Its role is supported by the other accessory reproductive glands, that is the seminal vesicle and bulbourethral gland (Cowper's gland). Male accessory reproductive gland excretions flow into the prostatic part of the urethra via the ejaculatory duct.
