Food Analysis. You analyze food to identify ingredients and additives as well as undesirable substances such as mycotoxins, heavy metals or prohibited substances. Foreign material has to be identified with food analysis methods for safety reasons, as well as to maintain good customer relations. You use microscopy to identify glass fragments, metals, plastics and stones as well as fragments from the food itself.

Food-Analysis-support-with-Microscopy

You can find protocols for light microscopy examination of food here. After selecting parameters of the method (ingredient of food which you are looking for, in what product, method of examination you prefer) a histological protocol will be recommended.
