The front headlamps
were mounted inside
the grilles rather than
externally to either
side of the bonnet, as

Access Free Fordson Major Engine

previously, and a new ' Fordson Super Major ' badge graced the sides of the bonnet. Red wheel centres remained, as used previously, and the output of the engine was still 52hp, as on the Power Major.

The Fordson E27N
Major was an
upgrade to the
Fordson N, and made

Access Free Fordson Major Engine

in England from March 1945, having the same engine and transmission as the Model N, but in a new casting which allowed for a PTO and a hydraulic lift unit manufactured by either Smiths or Varley. The differential however was of completely new design.
