*The Easiest Most Abundant Food To Grow – Gardening In A ...*

The first secret to gardening in a cold climate is to grow really hardy perennials, and there are a number of plants that are troopers no matter how harsh the winter or spring. As a general rule, those that die back to the ground each fall do better than evergreen perennials, although I have successfully overwintered both lavender ( Lavandula angustifolia ‘Munstead’) and sage ( Salvia officinalis ).

It's cold here! The short growing season and the cool, short summers were the main reasons we got into Tower Garden gardening and through the Tower Garden into hydroponics. We wanted to be able to grow more in a short summer, and also grow in the off season indoors all winter long. Here is our experience growing the Tower Garden in cold climate.

*Growing the Tower Garden in Cold Climate - Northern Homestead*

The plants do not need to be transplanted, we just move the whole Tower Garden out. Read more on planting a hydroponic garden here: Planting a hydroponic garden. Choose a perfect location. Peppers are a summer crop and prefer a warm, dry spot. In a cold climate, a greenhouse or a south-facing hot microclimate is best for them.
