Results: We estimated that 2.3 million deaths occur annually across countries for reasons attributed to work. The biggest burden comes from work-related illnesses, accounting for 2 million deaths...

(PDF) Global Estimates of Occupational Accidents and Work

For areas not covered by the reported information, rates from other countries that have similar or comparable conditions are applied. In 1994, an average estimated fatal occupational accident rate in the whole world was 14.0 per 100,000 workers, and the total estimated number of fatal occupational accidents was 335,000. The rates are different for individual countries and regions and for separate branches of economic activity.

Global Estimates of Fatal Occupational Accidents ... mated fatal occupational accident rate in the whole world was 14.0 per 100,000 workers, and the total estimated number of fatal occupational accidents was 335,000. The rates are

different for individual countries and regions and fatal occupational accident figures are higher than previously estimated. The new estimates can be gradually improved by obtaining and adding data from countries where

Global Estimates of Fatal Occupational Accidents

The ILO estimates that some 2.3 million women and men around the world succumb to work-related accidents or diseases every year; this corresponds to over 6000 deaths every single day. Worldwide, there are around 340 million occupational accidents and 160 million victims of work-related illnesses annually. The ILO updates these estimates at intervals, and the updates indicate an increase of accidents and ill health.

World Statistic

In this project, updated global estimates of fatal and non-fatal occupational accidents (with at least four days absence) and fatal work-related diseases are produced to be published by ILO in 2014. The estimates of occupational accidents are compiled based on 2010 data and respectively fatal work-related diseases based on 2011 data.

Global Estimates of Occupational Accidents and Work ... The estimated global total for fatal occupational accidents and work-related illness is 19% higher than the 2.33 million estimated in 2014, reflecting the inclusion of respiratory cases caused by chronic obstructive pulmonary disease (COPD) and work-related asthma, which was missing from the 2014 report.

Global work deaths total 2.78 million a year | IOSH Magazine We have estimated that globally there are 2.3 million deaths annually for reasons attributed to work. The biggest $Page \frac{4}{6}$

component is linked to work-related diseases, 2.0 million, and 0.3 million linked to occupational injuries. However, the division of these two factors varies depending on the level of development.

Global Estimates of the Burden of Injury and Illness at ... The objective of this doctoral thesis was to develop models to estimate the global number of occupational accidents and fatal work-related diseases. The study was done in three parts: the initial study and two update studies. The first one was carried out in 2001-2002.
