standardizes ground handling processes and  
procedures to reduce the complexity between  
working with multiple airlines, airports and  
ground service providers. Standardizing  
ground and ramp operations for airlines can  
help drive down costs, reduce the risk of  
aircraft damages and simplify training  
requirements.

Ground Operations Manuals, Standard Operating Procedures ...

The IGOM is your definitive source for the latest industry-approved standards harmonising ground handling processes and procedures for frontline personnel. The AHM & the IATA Ground Operations Manual (IGOM) are now stand-alone, interdependent products which are also available as combos. The AHM is policy driven and focuses on “what to do”.

1 The Ground Operations Manual The GOM should precisely define air operator general policies, duties and responsibilities of personnel, operational control policy and procedures – together with all instructions and information necessary to enable flight and ground personnel to perform their duties to the highest possible level of safety.

Ground Operations Manual (GOM)

The Operations Manual sets out the procedures intended to ensure the reasonable safety of all people present during regular events held at the ground. The key safety management procedures that should be addressed in the Operations Manual are: Spectator safety of event safety policy; Safety management

This course covers the many aspects of ground operations for which IATA has developed recommended industry standards and procedures, as detailed in the IATA Airport Handling Manual (AHM). Therefore, the AHM has been included in the study kit as it is an indispensable field publication that you will refer to throughout this course and in your day-to-day duties. The price of the study kit includes:

## AVIATION DIVISION GROUND OPERATIONS MANUAL (GOM)

Ground Operations involves all aspects of aircraft handling at the airport, as well as aircraft movement around the aerodrome except on active runways. The safety challenges of ground operations are partly associated directly with those operations; for example, ensuring that aircraft are not involved in collisions and that the jet efflux from large aircraft does not endanger small ones.

Ground operations are the tasks (excluding maintenance) that are carried out while an aircraft is on the tarmac before and after a flight. After an aircraft arrives, it's marshalled to a parking position. It's then either connected to an aerobridge, or stairs are positioned at the doors.

IATA's Safety Audit for Ground Operations (ISAGO) has been built upon a "backbone" of audit standards applicable to all ground handling companies worldwide, coupled with a uniform set of standards relevant for the specific activities of any ground handler.
