Sometimes travel to the lungs and grow there. When cancer cells do this, it's called metastasis. To doctors, the cancer cells in the new place look just like the ones from the head or neck where it started. Cancer is always named for the place where it starts.

If You Have Head or Neck Cancer Organ at Risk Segmentation for Head and Neck Cancer using Stratified Learning and Neural Architecture Search. OAR segmentation is a critical step in radiotherapy of head and neck (H&N) cancer, where inconsistencies across radiation oncologists and prohibitive labor costs motivate automated approaches. However, leading methods using standard fully convolutional network workflows that are challenged when the number of OARs becomes large, e.g. > 40 .

Grading of head and neck cancer The grade of a cancer gives the doctors an idea of how quickly it may develop. Doctors will look at a sample of the cancer cells under a microscope to find the grade of the cancer. Grade 1 or low grade – the cancer cells look like normal cells and usually grow slowly.
