Thermodynamics is a branch of physics that deals with heat, work, and  
temperature, and their relation to energy, radiation, and physical  
properties of matter. The behavior of these quantities is governed by  
the four laws of thermodynamics which convey a quantitative  
description using measurable macroscopic physical quantities, but may  
be explained in terms of microscopic constituents by ...

Relation to heat and internal energy. In thermodynamics, heat is energy in transfer to or from a thermodynamic system, by mechanisms other than thermodynamic work or transfer of matter. Heat refers to a quantity transferred between systems, not to a property of any one system, or 'contained' within it. On the other hand, internal energy is a property of a single system.
