Description Power transfer for large systems depends on high system voltages. The basics of high voltage laboratory techniques and phenomena, together with the principles governing the design of high voltage insulation, are covered in this book for students, utility engineers, designers and operators of high voltage equipment.

In this book the term high voltage is used as a generic term to include all voltages higher than 1000 volts, although the emphasis is on the typical voltage levels used power systems. High voltages, however, feature in many applications that are not related to the power system.

The High Voltage Engineering Corporation (HVEC) was founded by Robert J. Van de Graaff, Denis M. Robinson, and John G. Trump for the production of particle accelerators. The company develops and manufactures particle accelerator systems, electric power regulators, surface analysis instruments, vehicle monitoring equipment, and modular power connectors.

High Voltage Engineering Europa B.V. (HVE) is specialized in the development and manufacture of ion beam and electron beam technology based equipment and is the largest and most diverse manufacturer of particle accelerator systems for science and industry. In addition to research type accelerators systems HVE also manufactures industrial type accelerator systems and sub assemblies for semiconductor ion implantation systems and of electron beam processing systems.

In automotive engineering, high voltage is defined as voltage in range 30 to 1000 VAC or 60 to 1500 VDC. The definition of extra-high voltage (EHV) again depends on context. In electric power transmission engineering, EHV is classified as voltages in the range of 345,000- 765,000 V.

~~High voltage --- Wikipedia~~

High voltage engineering The principal objective of lecture notes is to cover the fundamentals of high voltage laboratory techniques , to provide an understanding of high voltage phenomena, and to present the basics of high voltage insulation design and techniques.
