His talk was essentially a teaser for How Google Tests Software that he co-wrote with Jason Arbon and Jeff Carollo. The premise of the book is that testers need to have engineering skills (sometimes to an equal extent as software engineers) in order for the testing discipline to reach first class citizenship on equal footing with development.

Google Testing Blog: How Google Tests Software - Part One

User focused testing is the job of the Google TE. Assuming that the SWEs and SETs performed module and feature level testing adequately, the next task is to understand how well this collection of executable code and data works together to satisfy the needs of the user. TEs act as a double-check on the diligence of the developers.

Google Testing Blog: How Google Tests Software - Part Two

In an article from 2011, InfoQ reports Google's testing department is relatively small for the amount of developers but works well because, like Facebook, every engineer is responsible for their own code's tests. Google's achieved this by creating a culture of testing, and not an abstract, disconnected testing department.

Google's organization structure is such that they don't have a dedicated testing group. Instead the company has more of a project-matrix organizational structure where testers are located in a group called Engineering Productivity where they report directly to a manager but are then shared to individual product groups like Android, GMail, etc.

Summary: How Google Tests Software - Chris Kenst

Software Testing is a Focus, Not a Team. As Google's team grew, software engineers building and testing their own didn't scale. Instead of rolling out a more traditional testing team, Google started creating specialized engineering roles to help boost the organization's QA bandwidth holistically.

Seamless delivery of cloud software at scale is a massive challenge, but one company has largely surmounted it: Google. In reaching this goal, a state-of-the-art testing process was of paramount importance. This book offers an unprecedented "under the hood" look at how Google tests its cloud software, introducing never-before-revealed best practices for testing and automation

How Google Tests Software | InformIT

The book starts off by describing the key roles at Google: SWE (Software Engineer), SET (Software Engineer in Test) and TE (Test Engineer). Briefly, the SWE builds features for Google's products, the SET develops testing infrastructure and larger-scale automatic tests, and the TE tests the products from a user's perspective.
