Configure Interface Speed and Duplex on Cisco devices By default, Cisco switches will auto-negotiate the speed and duplex settings. When you connect a device (either a switch, router, or a workstation) to a port on a Cisco switch, the negotiation process will occur and the devices will agree on the transmission parameters.

Configure Interface Speed and Duplex Cisco

Cisco recommends disabling CDP on any IP interface that does not have a need for it. To toggle CDP off and on for an entire device, use the `no cdp run` and `cdp run` global commands. To toggle it on a specific interface, use the `no cdp enable` and `cdp enable` interface subcommands.
