exposition of a new theoretical approach to the capital investment decisions of firms, stressing the irreversibility of most investment decisions, and the ongoing uncertainty of the economic environment in which these decisions are made. In so doing, they answer important questions about investment decisions and the behavior of investment spending.

Investment Under Uncertainty
by Avinash K. Dixit
Most investment decisions
share three important
characteristics it varying
degrees. First, the
investment is partially or
completely irreversible . In
other words, the initial
Page 6/19

cost of investment is at least partially sunk; you cannot recover it all should you change your mind. Second, there is uncertainty over the future rewards from the investment.

Investment Under Uncertainty - Montclair State University A real options theory - in its classic formulation suggests that firms invest less during times of high uncertainty, that is, uncertainty depresses investment. However, several theoretical extensions predict that the relationship between investment and uncertainty may be non-linear, or even Page 7/19

non-monotonic, when classic model assumptions are violated.

investment decisions is characterized by unrecoverable sunk costs, resolution of uncertainty through time, and the ability to invest in the future as an alternative to investing today. The options model provides guidance in such settings, including an investment decision rule called the "bad news principle": the downside investment state influences the investment decision whereas the upside investment state is ignored.

reviews: Investment under Uncertainty

A model of investment under uncertainty is developed in order to address these issues. The model of the firm is set in continuous time, and all agents are regarded as expected present value maximizers. The firm's profit function shifts through time according to a stochastic differential equation.
