### *Linear Programming: Word Problem Examples*

Several word problems and applications related to linear programming are presented along with their solutions and detailed explanations. Methods of solving inequalities with two variables, system of linear inequalities with two variables along with linear programming and optimization are used to solve word and application problems where functions such as return, profit, costs, etc., are to be

## *Example 1 - YouTube*

Linear programming is basically a fancy term for a constrained optimization problem consisting of linear constraints and a linear objective function. In this word problem, we formulate a set of constraints and an objective function, graph the feasible region, identify corner points, and finally plug those points into the objective to find the maximum profit.

Linear Programming Word Problems  
Worksheet II 1) You need to buy some filing cabinets. You know that Cabinet X costs \$10 per unit, requires six square feet of floor space, and holds eight cubic feet of files. Cabinet Y costs \$20 per unit, requires eight square feet of floor space, and holds twelve cubic feet of files.

## *Linear Programming WS II*

Linear equations word problems word problems can be tricky. Word problems for systems of linear equations are troublesome for most of the students in understanding the situations and bringing the word problem into equations. Scaffolded questions that start relatively easy and end with some real challenges.

Problems With Solutions typically word problems – not cool. But most will fit in the same mold: for these beginning problems, they will have two types of unknowns or variables, like earrings and necklaces, and they will involve inequalities. You'll just put the first variable on the  $x$ -axis and the second on the  $y$ -axis.
