characterized by the inability of peripheral tissues to uptake glucose, caused by a deficit in insulin or insulin intolerance. This disease is subdivided into two categories, type 1 and type 2.

~~Pharmacological management of Diabetes Mellitus—Physiopedia~~

The last 90 years have seen considerable advances in the management of type 1 and type 2 diabetes. Prof MacLean of Guy's Hospital wrote in the Postgraduate Medical Journal in 1926 about the numerous challenges that faced patients and their healthcare professionals in delivering safe and effective diabetes care at that time.

~~Current management of diabetes mellitus and future ...~~

The term diabetes includes several different metabolic disorders that all, if left untreated, result in abnormally high concentration of a sugar called glucose in the blood. Diabetes mellitus type 1 results when the pancreas no longer produces significant amounts of the hormone insulin, usually owing to the autoimmune destruction of the insulin-producing beta cells of the pancreas.
