In mathematics, a square root of a number x is a number y such that $y^2 = x$; in other words, a number y whose square (the result of multiplying the number by itself, or $y \cdot y$) is x . For example, 4 and $\sqrt{4}$ are square roots of 16, because $4^2 = (\sqrt{4})^2 = 16$. Every nonnegative real number x has a unique nonnegative square root, called the principal square root, which is denoted by \sqrt{x} , where the symbol $\sqrt{\quad}$ is called the radical sign or radix.
