MDRAO Manual - MDRAO
Semi-Critical Medical Device
Reprocessing. Semi-critical devices
may encounter mucous membranes
or non-intact skin during a procedure.
Examples of semi-critical medical
devices include cystoscopes,
anesthesia equipment, laryngoscopes
and some endoscopes. Semi-critical
devices should be free from
microorganisms, but small numbers
of bacterial spores may remain. 3
Semi-critical devices must be cleaned,
and sterilization is recommended.

Medical Device Reprocessing | Knowledge Center Page 6/14

Reprocessing of reusable devices is in many cases the most advisable and economical strategy. Reprocessing is intended as a means of cleaning and disinfecting (or sterilising) medical devices and making them available for reuse in a functional state. This represents the most important function of the RUMED.

MDRAO MDR Techniques Online Course Information - MDRAO The future of medical device reprocessing at Mount Sinai. Nov 9, 2018 | Mount Sinai Hospital, Medical Device Reprocessing Staff holding training manuals during an orientation session in their new space. Employees in the Medical **Devices Reprocessing Department** sterilize and package about 150,000 reusable instruments and medical devices every year. Soon they will be performing this vital task in a completely redesigned and expanded space but first thing 's first: construction must take place!

The future of medical device reprocessing at Mount Sinai ... Page 13/14

Medical device reprocessing is the process of cleaning, remanufacturing and disinfection of the medical devices so that those devices can be reused or to be put in service again. The reprocessed devices are biopsy, catheter, endoscope and pulse oximeter. By using on patients, reusable devices become soiled and contaminated with microorganisms.
