Aldehydes and ketones questions (practice) | Khan Academy

In the following practice problems, we will go over naming alkanes using the IUPAC nomenclature rules which include finding the parent chain, numbering it to have the substituents in the correct positions and finally putting all of this together to name the compound. The next exercise will teach you drawing the structure based on the IUPAC name.

Naming Alkanes by IUPAC nomenclature Rules Practice ...

The IUPAC nomenclature system is a set of logical rules devised and used by organic chemists to circumvent problems caused by arbitrary nomenclature. Knowing these rules and given a structural formula, one should be able to write a unique name for every

Naming Organic Compounds: Alkanes

In the previous post, we talked about the Cahn-Ingold-Prelog rules for assigning the R and S configuration. In the following practice problems, we will assign the R and S configuration for bond-line representations and use it to determine the relationship between the two compounds (identical, enantiomers or diastereomers), and also assign the R and S configuration on Fischer projections:
