Results: Basic science provides a rationale for the clinical observation that opioids sometimes increase rather than decrease pain. Central sensitization (hyperalgesia) underlies pain chronification, but can also be produced by high dose and high potency opioids. Many of the same mechanisms account for both central pain and opioid hyperalgesia.

Opioid prescribing for chronic pain. Opioids are very good analgesics for acute pain and pain at the end of life but there is little evidence that they are helpful for long-term pain. Despite this, they are widely prescribed for this reason - opioid prescribing more than doubled in the period 1998 to 2018.
